

DELONTI DENTURE IDENTIFICATION SYSTEM VIA RFID

A solution to identify and track New, Repaired and Refurbished Dentures

Dentist/Technicians can embed the tags in dentures or other appliances

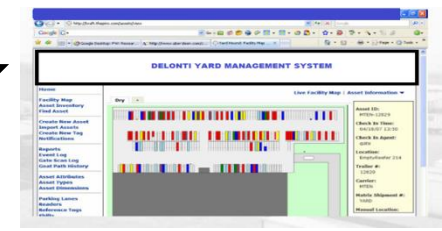

Tags only read through special reader device which are not available to all.

Establish the connectivity

Databases can be developed with either existing or custom software

- Patient Identifier
- Date of fabrication or repair
- Laboratory identifier
- Denture tooth shade or mould
- Identification of implant and implant accessories
